RE: Eichelberger FIU 2-21-28XHM Sec 21 – 14N – 13N Blaine Co., Oklahoma

Continental Resources, Inc., (CRI) requests an exception to Rule 165:10-3-4; requirement to set a 250' string of surface casing be waived and the surface casing to be set at 1500'.

## REASONS FOR REQUEST

This request is made in order to isolate the unconsolidated upper formations, guarantee wellbore integrity, aid with pressure control.

Wells that have been recently drilled in the area have been setting 1500' of surface casing and never had any noticeable lost circulation problems or cementing problems to surface. Additionally, drilling of the surface hole will be done using only fresh water, with periodic gelled fresh water sweeps for hole cleaning. CRI does not anticipate any significant damage that could be done to aquifers even if lost circulation should be encountered, though certainly this is not expected.

Surface hole will be drilled with fresh water native mud, with periodic gelled fresh water flushed as required for hole cleaning and to run casing.

Pump output and return will be monitored closely to detect losses.

Normal drilling time for 17 1/2" hole proposed surface depth is estimated 18-24 hrs and pipe shall be in place and cemented about 12 hrs thereafter.

An adequate supply of organic lost circulation material (fiber and hulls) will be available at well site in case minor or serious lost circulation should occur in drilling of surface hole. Will notify district office immediately if lost circulation occurs.

There is no known lost circulation in the 8 sections surrounding the proposed location.

Should severe zone of lost circulation be encountered, drilled portion of hole would be carefully enlarged to 200' (minimum required) depth or below and large casing would be run and cemented in stages required to cement completely to surface before drilling further.

Our anticipated casing and cementing prognosis is as follows:

Run 13 3/8" casing as follows:

Single Shoe +/- 40' 13 3/8", 54.5#, J-55, STC csg Insert Float +/- 1460' 13 3/8", 54.5#, J-55, STC csg

Mix and pump 800 sx Cement Mix + 3% calcium chloride + 1/4 #/sx celloflake, mixed @ 16 ppg, 1.18 yld.

Your consideration of our request that the 200' setting depth be extended to 1500' is appreciated. If you need any additional information on this matter, please contact me at the letterhead address.

Sincerely,

Christi Scritchfield
